Unless otherwise stated in this Bylaw, the following measurements are to be taken at the property line, facing towards the source of the item being measured:

Exemptions: where the lighting is a legislated requirement, such as emergency exit lighting, the lighting will be exempt from this regulation.

c) Air Quality: No air contaminants generated on a parcel may exceed the mean air quality level calculated as the average of at least 6 air quality level measurements taken at approximately even intervals during the averaging time set out in column two below shall not exceed the air quality level stipulated in column three below:

Air Contaminant	Averaging Time	Air Quality Level (ug/m^3)
Carbon monoxide	1-hour	30,000
Nitrogen dioxide	1 hour	200
Sulphur dioxide	1 hour	450
Ozone	8 hour	126
Inhalable particulate matter (PM_{10})	24 hour	50
Fine particulate matter ($PM_{2.5}$)	24 hour	25

Please Note: These regulations work hand in hand with the existing Noise Regulation Bylaw and Nuisance Abatement Bylaw, as well Metro Vancouver's air quality regulations.

(ii) a depression below the normal natural or finished grade created for the purpose of providing a pedestrian entrance to a building subject to the following conditions:

(a) only one pedestrian entrance is permitted as a localized depression on a single family residential building;

(b) on any side of a building in a single family residential zone, the total localized depression width shall not exceed 2.44m (8 ft.) in width and 3.02m^2 (32 sq.ft.) in area for a pedestrian access;

(c) A 1.8 m (6 ft.) wide landscape strip is required at the rear of any property abutting land zoned Residential (RS, RL and RM) which is not occupied by vehicle access.

Please note: Landscaping may also be used to address storm water management requirements as established in the Development Services Bylaw.

600-A.16 Zone Specific Development Permit Regulations

In addition to the District-wide form and character Development Permit Guidelines in the Official Community Plan, these additional guidelines provide further design direction to maintain the village character of Deep Cove. These additional guidelines are applicable to all development in the Village Commercial- Gallant Avenue Zone (VC-G).

1. Roof Lines:

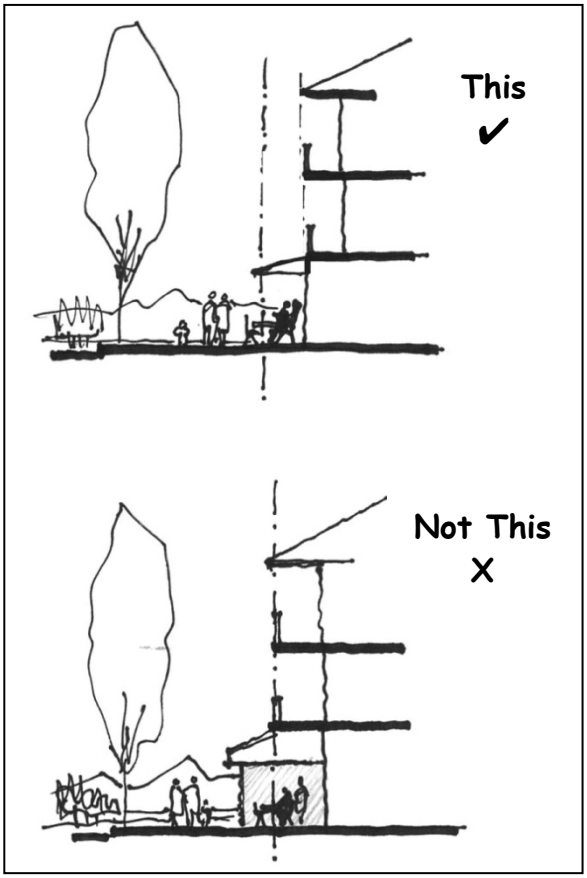
a) While sloped roofs are preferred in Deep Cove, it is recognized that part of Deep Cove's charm is its eclectic mix of styles, so alternative roof styles will be considered.

b) In all cases, roof lines should be designed to reduce the impression of the bulk of the building. On sloped sites, building massing and roof lines should be stepped to follow the grade.

2. Views:

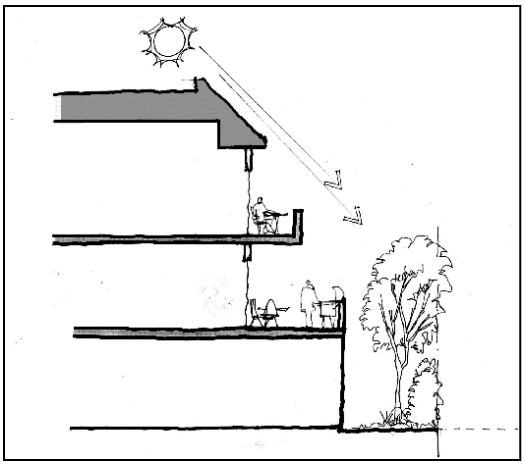
a) Looking east down Gallant Avenue there is an existing public view of the Cove. This view should be protected by ensuring that new development meets the front yard setbacks described in the zone, and by stepping back upper stories, particularly the 3rd floor (where permitted) to provide a greater feeling of openness.

b) Preservation of the public views should be considered in the design of awnings and patio spaces. Screens or temporary enclosures (weather shields) that block public views down the street should be avoided.



3. Neighbourly Setbacks:

a) Where new development is adjacent to land



zoned Single Family and Multi Family Residential (RS and RM), every effort should be made to design in a way that minimizes impacts to residential neighbours through:

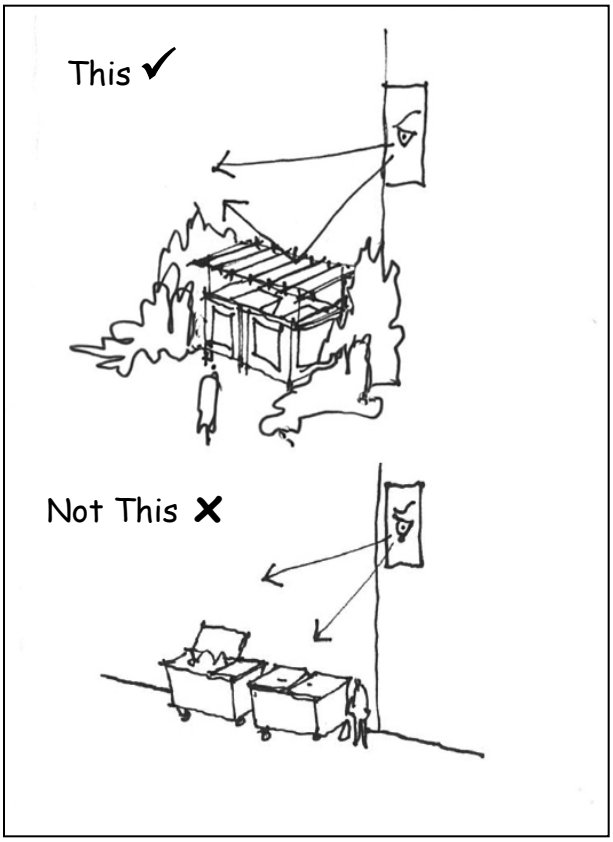
- The provision of a landscape buffer along the property li where feasible;
- The use of heights and setbacks to reduce the effects of over-shadowing; and
- The careful design and location of balconies and windows t reduce over-looking.

4. Building Materials:

a) While there is a mix of building materials used in Deep Cove, there is a preference that buildings use wood or fibre cement cladding which has the appearance of wood. The use of metal, stucco, and exposed concrete is discouraged but special consideration will be given to these materials where excellence in design can be demonstrated.

5. Sidewalk Treatment:

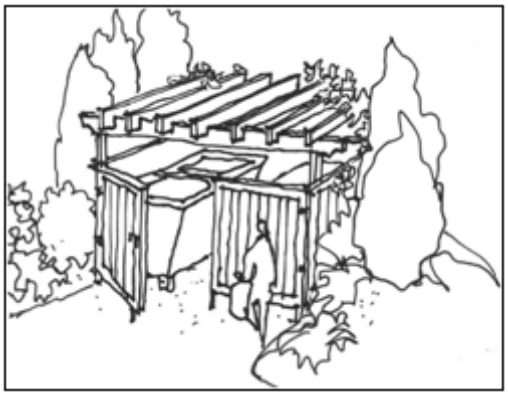
a) The public plaza and intersection of Gallant Avenue and Panorama uses brick pavers. Consideration should be given to further use of brick pavers in sidewalk and patio areas to continue the theme in the village.



6. Parking, Loading and Garbage Areas:

a) Ensure the location and design of parking, loading and garbage areas minimize impacts of these areas on adjacent residential properties.

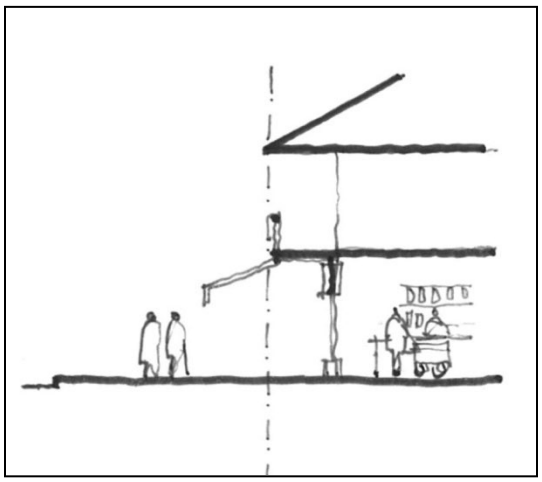
b) Where appropriate, use landscaping to screen parking, loading and garbage areas from view.



7. Commercial Units

a) All buildings facing Gallant Avenue should include commercial space that relates to the street and creates a pedestrian-friendly streetscape.

In particular, designs should consider:

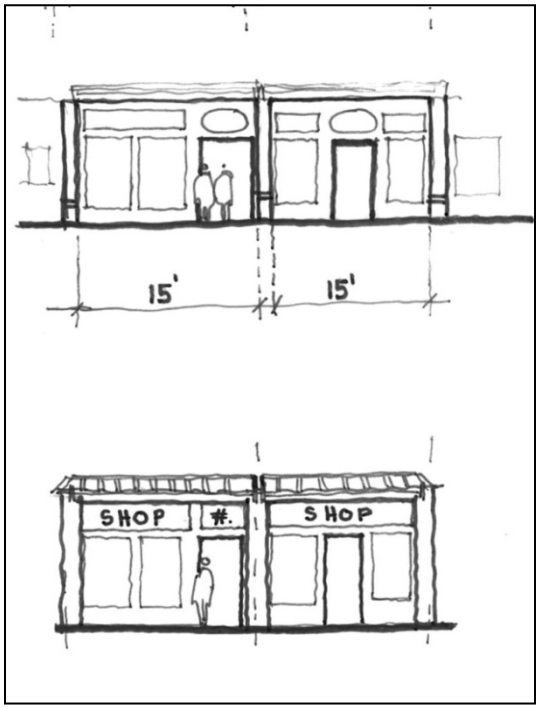


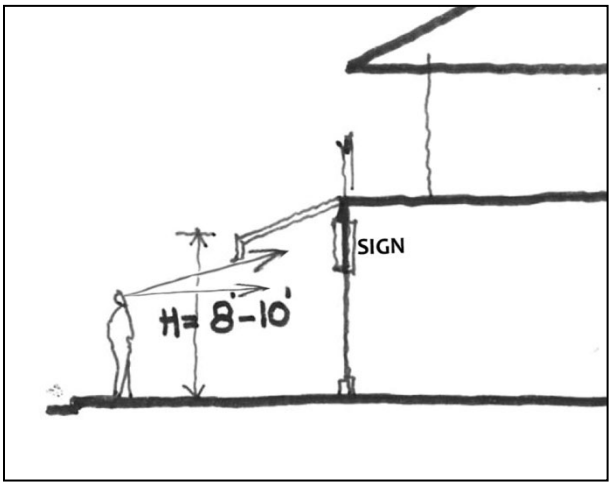
i) At-grade commercial space should be designed with doo and large windows that face and relate to the sidewalk;

ii) Glazing should be clear and inviting and use of intensive window signage or storage should be avoided;

iii) Building mass should be broken into storefronts of no more than 4.5 metres (15 ft) wide;

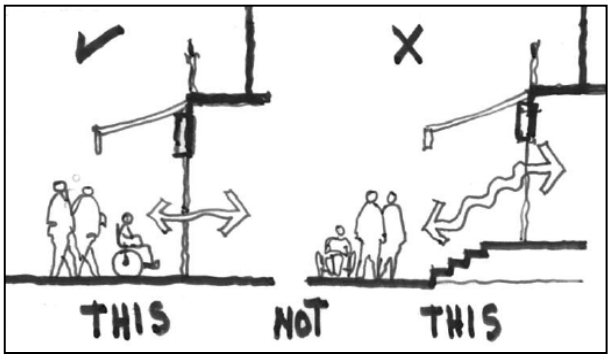
iv) Sign bands, awnings and canopies should be coordinated with storefronts and window alignments



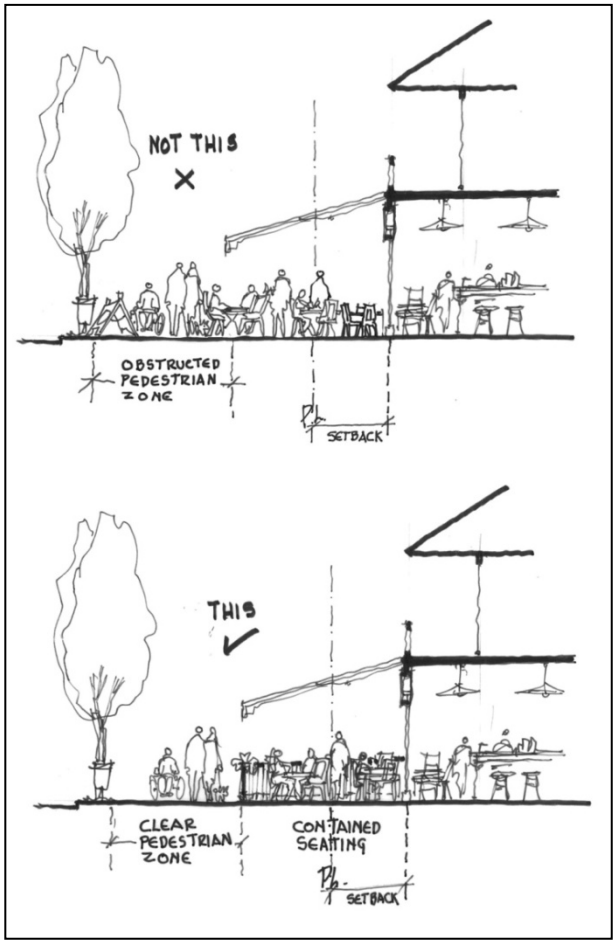


v) Awnings should be located 8-10 ft above grade;

vi) On Gallant Avenue, awnings should have a fabric appearance; special consideration will be given to alternative styles, where excellence in design c be demonstrated;



vii) Every effort should be made to ensure ground level commercial units are at the same level as the adjacent sidewalk and <u>avoid the use of stairs</u> between the sidewalk and the front facade; and



viii) Where restaurants or cafes are considering designs for patio or outdoor customer seating areas, these areas should be designed to contain the seating so that chairs and tables do not block so much of the public sidewalk that there is no longer a clear path for pedestrians of at least 1.5 m (4.9 ft) in width.

8. Residential Units:

a) It is recommended that all units have access to an outdoor amenity space (balconies, patios or roof decks) on site of at least 4.7 m^2 (50 sq ft) per unit. The amenity space must be large enough to accommodate a bar-b-q and seating, and so it is recommended that it has at least one dimension which is 1.8 m (6 ft) in depth.
